

YOUR FARM, YOUR CHOICE.

The state of California is on a path to mandate electric-only energy, which could take away farmers rights to choose propane or other clean-alternative fuels. This is not only risky and impractical, but it also ignores the many economic and environmental benefits clean-energy propane and other alternative fuels provide Californians.

In October 2019, hundreds of thousands of Californians were held hostage by the largest blackout in California history. The State of California doesn't have a plan to keep the lights on, and yet our regulators are on a path to mandate "electric-only" energy.

Propane and Sustainability

Propane is already a cost-efficient, low-carbon fuel.

As renewable propane becomes more widely available, propane will further cement its reputation as an essential tool for sustainable agriculture. Propane derived from biomass sources is already in use. Research is underway that may yield other renewable sources of propane.

DON'T WAIT, TAKE ACTION TODAY!

You can do that by joining us in our unified effort to fight for our and your rights to all forms of alternative, clean energy sources.

Visit protectmypropane.com and follow the on-screen instructions, it's that simple!
